

Log Cleaner & Brightener

Bring Your Logs Back to Life

The Basics of Applying CPR

Preparation*

1. Read this entire Data:Tec (CPR 002) before applying any product.
2. Decide if you need to use the cleaner or brightener strength.
3. Wear protective eyewear, such as safety glasses with side shields or goggles, when applying this product. Neoprene gloves and long-sleeved clothing are recommended to help protect skin. Hydrogen peroxide is released when CPR is dissolved in water, so use with good ventilation.
4. Brush any dirt, loose material or other contaminants from wood surfaces to ensure that CPR makes good contact with the surface you wish to clean or brighten. Keep the solution off surfaces you do not want bleached.
5. Use in warm weather, between 60° and 90°F, for best results.

*NOTE: CPR is not recommended for use on redwood. CPR will darken redwood.

Cleaner Strength

(for less severe discoloration and surface cleaning)

Mix 1/2 of the container with 4 gallons of clean water in a clean 5-gallon plastic pail.

Brightener Strength

(for aggressive cleaning)

Mix the entire container with 4 gallons of clean water in a clean 5-gallon plastic pail.

Mixing

Stir thoroughly until the powder is mostly dissolved (which will take a few minutes, depending on water temperature). The solution will begin to “fizz” as the powder dissolves. Not all of the powder will completely dissolve in the solution; even if all of the powder is not completely dissolved, the solution is very usable. For the best and most consistent results, the solution should be used within 4 hours.

Before CPR

After CPR

Coverage

At either strength, solution coverage is between 100 and 150 square feet per gallon (500-750 square feet per 5 gallons), depending on the wood porosity.

Application

Apply CPR to one wall at a time, starting at the bottom and working completely across, 2-5 logs high. When the bottom 2-5 logs are completely cleaned and/or brightened, then move up the wall to the next 2-5 logs. Continue in a similar pattern to the top of the wall. Work only on one small area at a time (15-25 sq. ft.) for best results. Rinse with clean water as you go. Apply via garden sprayer, brush or mop. Allow the solution to work for 5-20 minutes, keeping the surfaces wet with additional CPR solution. For best results, vigorously scrub the surfaces with a stiff-bristle brush to remove unsound surface wood. After you've cleaned the entire wall with the CPR solution, starting at the top, rinse the entire wall thoroughly and allow to dry before application of preservatives or stains. Repeat applications of CPR solution may be necessary for tougher discolorations, more severe UV damage and/or heavily weathered wood surfaces.

Cleaning

Clean brushes and equipment with soap and water.

Warning

Avoid contact with eyes and skin and do not ingest. Keep away from children and animals. Harmful if swallowed. CPR Log Cleaner & Brightener will not harm grass or most plants
