

Introducing...

New Age Blast Media!

Manufactured from

100%

Recycled Bottle Glass

- The use of post-consumer glass benefits the environment by **reducing landfill waste**.
- The manufacturing process cleans and grinds the recycled glass into a usable industrial grade, expendable abrasive which can replace more hazardous slag/mineral abrasives.
- The product is sized and screened into multiple specifications needed for various Abrasive Blasting needs. Can be used for dry or wet blasting applications.
- Bottle or Tri-Mix Glass is chemically known as "**Amorphous Silica**". It contains virtually **no crystalline-silica** which is commonly found in blasting sand.

Performance Benefits for the Log Home Industry

- **Sharp-edged particles** allow for removal of tough coatings, paint and rust. **Will not harm soft substrates, leaving a finer felting than other blasting media.**
- Unlike some other organic media, product **will not mold** when it gets wet. This is critical on outside jobs where total containment can be a challenge!
- Because glass provides an acceptable texture on wood, contractors report **substantial labor** savings from having to use hand sanders after organic media like cob/shells.
- Product can easily be used with virtually all standard blasting pots and equipment. We recommend the Kernel.

*Before— Field Success
Story: Masterblast, Inc.,
April 2008*

After— Masterblast Inc., a Chicago based contractor has been using New Age Blast Media for well over a year. They have used the product as a direct replacement for products like cob and soda. The pictures here are from a job in an industrial warehouse in Chicago. Masterblast has used both the Medium and Fine Grades of New Age Blast Media on many jobs throughout the Chicago area with similar results illustrated in these pictures.

Health & Environmental Benefits!

- **100% recycled material** which is diverted directly from landfills.
- Glass is chemically non toxic and inert. **No mold** if it gets wet!
- **No Crystalline Silica**—will not cause Silicosis.
- **No Toxic Metals** such as arsenic, beryllium, nickel, lead etc. — all commonly found in coal, copper, nickel slags and some mineral abrasives.
- Approved by the **California Air Resources Board (CARB)**
- Glass is listed on **EPA's Comprehensive Procurement Guidelines** for Blasting Grit!
